

# RHP Internet Research

## 16-1 Powerpoint Research

Name \_\_\_\_\_

PowerPoint is a multimedia program that allows you to present data and statistics to other people using the computer. In this exercise, everyone will be creating a presentation on Lemmings. Lemmings (not the band or the game) are furry little arctic creatures. For years, people thought that when the lemming population got to large, the furry little rodents would run to the nearest cliff and jump to their deaths. This is probably not true.

For this assignment, use the Internet to find any information you can about lemmings. Collect facts and pictures that you can use in your presentation.

Make sure you obtain at least 2 pictures of lemmings and plenty of facts about lemmings.

Get everything together today – in the next assignment we begin to assemble a Powerpoint presentation.
